

### **Vintage look:**

The box of this unit is totally handcrafted. After drilling and varnishing, the surface gets processed with a hand grinder several times to get the reliced look.

Every single unit and box is unique because of this special machining method.

### **Power:**

You have to insert a standard 9-18 volt DC power adaptor (2.1mm with negative tip) into the dc jack to power up the pedal. A higher supply voltage results in more headroom, clarity and greater dynamic response.

This unit runs off 9-18 volt DC only, do NOT use adaptors with higher voltages or alternating current (AC).

### **True bypass:**

The footswitch operates as a true bypass to guarantee best signal quality when unit is in bypass mode.

**The BASTARD uses a 100% pure analog circuit for the audio path.**

# BASTARD

## LOW END DISTORTION

The BASTARD is a dynamic medium to high gain distortion.

The BASTARD is very useful in modern styles of music because of its dynamic response and transparency on the one hand and the powerful and aggressive sound with lots of punch and low end on the other hand. There are also tons of gain available.

The active 3-band equalizer is a very powerful tool and it's possible to get a wide range of totally different sounds. Furthermore, it's possible to create heavy mid-scooped sounds which are used in modern styles of music by simply turning back the MIDDLE knob.

The toggle switch allows you to choose between three different sound voicings (more or less highs and mids). In mid position, you will get the most modern sound with lots of highs and scooped-out mids.
