

MASTIFF DISTORTION

The MASTIFF is a british voiced medium to high gain distortion.

The MASTIFF produces a warm sound with lots of mids and it's the first choice for a powerful british high gain sound. Even with maximum gain the sound comes with much pressure and without being muddy.

The active 3-band equalizer is a very powerful tool and it's possible to get a wide range of totally different sounds. Furthermore, it's possible to create mid-scooped sounds which are used in modern styles of music by simply turning back the MIDDLE knob.

The mid-frequency range is the key element in your guitar sound. So we decided to come up with a toggle switch which allows you to choose between different center frequencies to cut/boost with the MIDDLE knob.

Vintage look:

The box of this unit is totally handcrafted. After drilling and varnishing, the surface gets processed with a hand grinder several times to get the reliced look.

Every single unit and box is unique because of this special machining method.

Power:

You have to insert a standard 9-18 volt DC power adaptor (2.1mm with negative tip) into the dc jack to power up the pedal. A higher supply voltage results in more headroom, clarity and greater dynamic response.

This unit runs off 9-18 volt DC only, do NOT use adaptors with higher voltages or alternating current (AC).

True bypass:

The footswitch operates as a true bypass to guarantee best signal quality when unit is in bypass mode.

The MASTIFF uses a 100% pure analog circuit for the audio path.

OVERVIEW
